1.1 $\log(\text{Ac})$ All

1.2 $\log(\text{Ac})$ 5'

1.3 $\log(\text{Ac})$ 3'

1.4 $\log(\text{Ac})$ ORF

1.5 log(Met) All

1.6 $\log(\text{Met})$ 5'

1.7 $\log(\text{Met})$ ORF

1.8 $\log(\text{Ac})$ 3'

2 Metilation/Acetilation plots

Genes have been classified as variant or not on the basis of a previous study.

Fragments have been set to "noexprs" if transcription value is under threshold (i_4). Fragments have been set to "silenced" if methylation value is over threshold(i_3).

```
##  
## FALSE TRUE  
## 114212 2445
```

Here we have highlighted those genes that are "variant" (as shown in previous studies) and differentially expressed between 10G and 1.2B. Variant genes which are overexpressed have been set to "variant active" and viceversa.

10G and 1.2B fragments have been pooled together for the grafic. Blurred point correspond to fragments representing the rest of genes (those that are not

differentially expressed).
